SWISS ARMY KNIVES

2007 New Product Introductions

INTRODUCING
EVOGRIP

The Evolution Series represented a dramatic and unique redesign of the venerable Swiss Army knife by employing a new, smart ergonomic handle. Now, Wenger is taking the next step in the progression of the Evolution platform with EvoGrip. By adding rubber to the most critical areas of the handle, the knife's safety, performance and functionality have been increased again.

EvoGrip 16

EVOGRIP

■ 16811

The Swiss Army knife was built on the premise of portable functionality. With that thought in mind, Wenger developed the Nail Clipper Swiss Army knife. Made of tempered stainless steel, this retractable precision instrument fits in your pocket but is capable of delivering professional results at home, in a hotel room or even in the great outdoors. It also features an ingenious deployment lever which lifts the tool out of the housing to avoid potential damage to your nails.

Pastel Pink #16973

INTRODUCING THE
RANGER

Our new Ranger Series was created for those challenges that take a little more skill, a little more knowledge and tools that are a little more powerful. These knives feature a 4-inch blade that is capable of cutting those more demanding projects down to size. The Ranger also sports ergonomic handles which improve the knife's safety, performance and functionality. And with features like deployable pliers, one-hand-opening blades, heavy-duty scissors, electrical wire insulation cutter, a gutting tool, not to mention Swiss craftsmanship – it's safe to say that the Ranger delivers a little more than your typical knife.

RANGER
